

## Discover machine wear earlier

A new approach to condition based monitoring

**REGISTER AT [GILLSC.COM/WEBINAR](https://gillsc.com/webinar)**

**When: March 3 & 4, 2021**

**Time: See below for your nearest time zone**

**Topic: Discover machine wear earlier - a new approach to condition based monitoring**

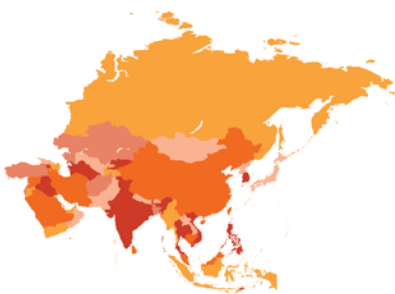

This webinar provides information on an effective addition to a condition based monitoring (CBM) portfolio – Continuous Oil Debris Monitoring. This new approach to CBM allows earlier awareness of mechanical damage and maintenance needs, especially in scenarios such as variable load gearboxes and low speed systems where other techniques struggle to identify problems before it's too late.

If you're interested in:

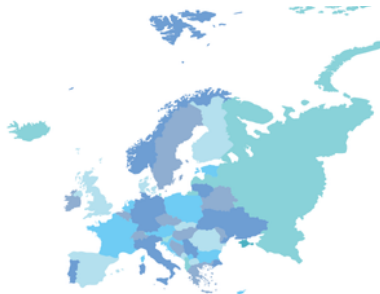

- the latest approaches in condition based monitoring
- increasing reliability of oil lubricated equipment
- understanding earlier what changes are occurring in vital equipment

Register for our 45 minute webinar to learn how Continuous Oil Debris Monitoring enhances your CBM options.
